

Azure Training for Hybrid Environments: Azure VMs Running Windows Server 2022

This Azure training covers Azure Virtual Machines (VMs) and using Windows Server 2022 on a VM in a hybrid environment. If you use a hybrid cloud environment and need virtual machines to provide compute resources, run applications remotely, enhance network operations or even accelerate development and deployment, this course will show you how to run Windows Server 2022 on your Azure VMs and optimize your network operations.
