

Azure Training for Hybrid Environments: Managing Windows Server 2022

This Azure training covers how to take advantage of the opportunities in the Azure cloud for on-premise data centers and networks running Windows Server 2022. Anyone whose job responsibilities include managing Windows Server workloads in any environment should take this course. This course will show you how to take full advantage of Azure without the need to bring over all your files, resources and servers from your on-prem racks.
