

Creating a Base Configuration for Cisco Devices

This entry-level Cisco training prepares learners to create and implement a base configuration — a core set of common commands — on a Cisco device. Historically, networks were little more than interconnected, individual servers and routers. The challenge of administering such networks is making sure that each packet that moves through them is speaking the right language or formatted the right way.

WEEK 1

Create a Base Configuration for Cisco Devices

108 min.

Introduction to Create a Base Configuration for Cisco Devices	1
Configuring Device Identification (Hostname and Banner)	8
Configuring Foundation Security and Passwords (Console, VTY, Enable Sec)	15
Configuring IP Addresses and Enabling Interfaces	10
Initial Tuning and Configuration Management	14
Telnet and SSH Implementation	16
Ensuring Proper Base Configurations	38
Review of Create a Base Configuration for Cisco Devices	5
