

Full-Stack React Development

Learn the JavaScript that makes ReactJS possible and how to manipulate it to increase performance, make better use of APIs and test and scale your code easily. Round out your familiarity with JavaScript libraries and ReactJS with this Full-Stack React Development training.

WEEK 1

Essentials of the MERN Stack

158 min.

Introduction	1
Basic MERN Stack Structure	5
Front-end Setup	7
Back-end Setup	11
Building a React Front-end	10
Loading Data from the Back-end	12
Creating Resources	8
Updating and Deleting Resources	7

MERN Stack Database Basics

Overview	1
Introduction	1
MongoDB Basics	13
Development Flow Improvements	12
Connecting to MongoDB from Node	6
Loading Data from MongoDB	5
Inserting Data into MongoDB	5
Deleting Data in MongoDB	5
Updating Data in MongoDB	3

Load Server-Side Data in React

Overview	1
Introduction	1
Basic Full-stack Conversion Strategy	6
Full-stack Server Setup	8
"Read" Server Endpoints	13
Converting Pages to Use Server Data	15

WEEK 2

166 min.

Converting Context to Use Server Data 11

Create and Modify Server-Side Data in React

Overview 1

Introduction 1

"Create" Server Endpoints 10

Making "Create" Requests from the Front-End 8

"Delete" Server Endpoints 7

Making "Delete" Requests from the Front-End 7

"Update" Server Endpoints 8

Making "Update" Requests from the Front-end 6

Firestore Auth Basics

Overview 1

Introduction 1

What is Firestore Auth? 4

Creating Pages 11

Redirecting Unauthenticated Users 12

Signing In With Firestore Auth 12

Listening for Auth Changes 12

Account-Creation and Error Handling in Firestore Auth

Overview 1

Introduction 1

The Firestore User Object 9

Create Firestore Auth Accounts 12

Auth Error Handling 12

Auth-Conscious Navigation Bars 16

WEEK 3

Advanced Firestore Auth Patterns

162 min.

Overview 1

Introduction 1

Creating Custom Hooks for Auth 12

Using Custom Hooks Inside Components 14

Functions Inside Custom Hooks 8

Creating Accounts In Custom Hooks 6

Logging Out In Custom Hooks 5

Firestore Auth in Full-Stack Apps

Overview 1

Introduction 1

Express Server Setup 18

React Front-end Setup 9

Making Requests with Auth Tokens 20

Endpoint Security with Firestore Auth

Overview 1

Introduction 1

Verifying Tokens with Firestore Admin 12

Protecting "Update" and "Delete" Endpoints 9

Protecting "Create" Endpoints 11

Using Auth Middleware 12

Add Firestore Auth to Existing React Apps

Overview 1

Introduction	1
Adding a Login Page to Existing Apps	14

WEEK 4

160 min.

Encapsulating Auth Logic with Context	20
Adding Auth to a Navigation Bar	9
Creating Custom Hooks for Context	5

Add Firebase Auth to Existing Express Servers

Overview	1
Introduction	1
Data Ownership on the Back-end	26
Automatically Including Tokens In Requests	13
Protecting User Data in Endpoints	16

Build a Note-Sharing App: Create a Simple React Front-End

Overview	1
Introduction	2
Map Out the App	11
Create Pages and Set Up Routes	12
Build the Notes Page and List	10
Build the Note Detail Page	16

Build a Note-Sharing App: Front-end Data Management

Overview	1
Introduction	1
Store Note Data Inside A Context Provider	12

WEEK 5

159 min.

Add A Create Note Modal	11
Creating New Notes in Context	9
Deleting Notes in Context	9
Updating Notes in Context	5

Build a Note-Sharing App: Add Styling

Overview	1
Introduction	1
Add Styling to the App	22
Create A Reusable "X" Component	16
Create A Navigation Bar	5
Render Markdown in React	3

Build a Note-Sharing App: Create a Back-end with Node and Express

Overview	1
Introduction	1
Full-Stack Project Setup	15
Create a "Read" Endpoint And Load Data From the Client-Side	14
Add a "Create" Endpoint And Make Requests From the Client-Side	7
Add "Update" And "Delete" Endpoints	10

Build A Note-Sharing App: Add a Database

Overview	1
Introduction	1
Add MongoDB to the Back-end	6
Convert Endpoints to Use MongoDB	9

Split Express Servers Into Multiple Files 9

WEEK 6

152 min.

Make MongoDB Available in Different Files 10

Rewrite Routes To Increase Performance 11

Build A Note-Sharing App: Add User Authentication to the Front-end

Overview 1

Introduction 1

Create Login and Create Account Forms 19

Add Login and Create Account Pages 11

Styling the Login and Create Account Pages 6

Add Firebase Auth to the Front-end 10

Build A Note-Sharing App: Add User Authentication to the Back-end

Overview 1

Introduction 1

Install and Set Up Firebase Admin 5

How Should We Organize Our Database? 19

Convert Endpoints for Ownership 10

Data Ownership in Create and Delete Endpoints 14

Build A Note-Sharing App: Front-end Refactoring

Overview 1

Introduction 1

Subscribe to Auth State Changes 12

Protect Routes with Arbitrary Criteria 10

Create a useUser Hook 6

WEEK 7

153 min.

Include Users' Tokens in Requests 18

Build A Note-Sharing App: Protect Users' Data

Overview 1

Introduction 1

Protect Users' Data from Unwanted Access 7

Prevent Users From Deleting Other Users' Data 9

Prevent Unauthorized Data Modification 7

Add Protection to the Create Note Endpoint 4

Use Middleware to Reduce Repetition 14

Add More Middleware 12

Build A Note-Sharing App: User Account Management

Overview 1

Introduction 1

Data Segregation Demonstration 8

User Account Creation 18

Handle Login and Create Account Errors 18

Build A Note-Sharing App: Add Note-Sharing to the Front-end

Overview 1

Introduction 1

Create a Page for Editing Sharing Settings 16

Create a Shared Emails List 13

WEEK 8**165 min.**

Basic Front-end Sharing Logic 16

Build A Note-Sharing App: Add Note-Sharing to the Back-end

Overview 1

Introduction 1

Add a "Share Note" Endpoint 17

Make "Share" Requests from the Front-end 11

Add "Unshare" Functionality 8

Load Shared Notes 9

Build A Note-Sharing App: Add User Permissions

Overview 1

Introduction 1

Hide Elements Based On Ownership 7

Add Permission Levels To the Back-end 16

Add Permission Levels To the Front-end 10

Allow Other Users to Edit Notes 17

Build A Note-Sharing App: Email Verification Basics

Overview 1

Introduction 1

Email Verification Basics 7

Create a "Please Verify Email" Page 7

Refactor the Create Account Flow 12

Send Emails From A Node Server 19

WEEK 9**Build A Note-Sharing App: Advanced Email Verification****152 min.**

Overview 1

Introduction 1

Create an Email Verification Landing Page 19

Create an Email Verification Server Route 8

Protect Server Routes from Unverified Users 14

Prevent Unverified Users from Logging In 13

Build A Note-Sharing App: Link Sharing

Overview 1

Introduction 1

Create an Enable/Disable Section 11

Create an Endpoint for Enabling Link Sharing 13

Create an Endpoint for Disabling Link Sharing 5

Load Link-Shared Notes from the Server 16

Build A Note-Sharing App: Real-Time Communication

Overview 1

Introduction 1

Web-Socket Basics 8

Add Web-Sockets to Express 6

Add Web-Sockets to React 8

Send Data Through a Web-Socket 7

Convert "Load" Requests to Web-Sockets 15

WEEK 10**151 min.**

Build A Note-Sharing App: Web-Socket Protection

Overview	1
Introduction	1
Create "User Can Edit Note" Middleware	10
Convert Express Middleware to Socket.io	9
Middleware for Individual Events	8
Handle Socket Errors on the Front-end	8
Create a Custom Hook for Web-Sockets	13

Build A Note-Sharing App: Web-Socket Organization Strategies

Overview	1
Introduction	1
Organize Web-Socket Logic Effectively	9
Define Event Handlers in Separate Files	15
Define Initial Connection Logic	6
Add Socket Middleware	17

Build A Note-Sharing App: Web-Sockets In-Depth

Overview	1
Introduction	1
Keep Client Data In Sync	7
Prevent Infinite Socket Loops	6
Add Roles to Web-Socket Data	14
Use Web-Socket Rooms	9
Web-Socket Data Protection	9

Build A Note-Sharing App: Combine Web-Sockets and Endpoints

Overview	1
----------	---

WEEK 11

49 min.

Introduction	1
Multiple Web-Socket Connection Types	15
Handle New Web-Socket Connections	7
Loading Data Via Web-Sockets	9
Update Client-Side Data Immediately	16
