

Azure IAM Tutorial

This Azure IAM Tutorial training covers how to provide authorization to all your network users on an Azure cloud-based network using Azure Identity and Access Management (Azure IAM). Azure-based networks depend on Microsoft Entra ID (formerly Azure Active Directory) and Azure IAM to accurately identify users and give them access to all the resources they need and none they shouldn't have. This training will familiarize you with how Azure IAM works, how to configure it and one simple way to help keep your network safe.
