WEEK 1

Understanding Git Internals

152 min.

Intro to Git Internals Concepts	10
Explore the Git Database Folder	8
Explore Git Commit and Blob Objects	10
Understanding Git Trees and Subtree References	10
Explore Git Branch Pointer Internals	9

Understanding Git Submodules

Overview	1
Intro to Git Submodules	8
Create Git Submodule Repository Reference	9
Understanding Git Submodule Updates in Parent Repository	8
Set Git Submodule to Use Branch Tracking	9
Perform Recursive Git Clone with Submodules	12
Remove Git Submodule References from Parent Repository	4

Deep Dive into Git Commit Techniques

Overview	1
Intro to Advanced Git Commit Techniques	9
Staging and Unstaging Files for Git Commits	10
Interactively Stage Changes with Git Add	5
Modify Previous Git Commits	9
Advanced Git Log Parameters	11
Create Useful Git Log and Commit Aliases	7

WEEK 2

154 min.

Learn Configuration Options for Git CLI

Overview	1
Intro to Git CLI Configuration	4
Understanding Git Configuration File Scopes	8
Configure Preferred Git Text Editor	9
Set Default Git Branch and Command Autocorrect	9
Configure Git Merge Tool for Conflict Resolution	10
Use Short Git Status and Disable Output Colorization	8

Configure Git Lifecycle Hooks

Overview	1
Intro to Git Lifecycle Hooks	10
Understanding Default Git Hooks Structure	9
Prevent Git Commits With Too Many Files	9
Prevent Git Commits from Large Repositories	11
Change Your Git Hooks Directory	5
Modify Git Commit Message with commit-msg Hook	9

Working with Large Binary Files in Git

Overview	1
Intro to Git Large File Support (LFS)	12
Install Git LFS on Linux and Windows	9
Register Git LFS in Git Repository	6
Commit Binary Image Files Into Git LFS	9
Migrate Binary Files from Git into Git LFS	11

Lock Files for Changes with Git LFS	8
-------------------------------------	---

WEEK 3

158 min.

Securely Handling Secrets in Git Repositories

Overview	1
Intro to Handling Secrets in Git Repositories	9
Install Git Secret CLI on Linux Dev Systems	9
Generate GPG Encryption Keys	8
Encrypt Secret File and Push Changes to GitLab	9
Decrypt Git Secrets as Secondary Dev User	11
Encrypt Secrets in Reverse Direction	5

Using Git In The Terminal with Vim

Overview	1
Intro to Vim and Git Plugins	10
Setting Up Vim on Linux	9
Install Vim-Plug Plugin Manager	7
Install Vim Airline Status Bar Plugin	10
Install Vim Git Gutter Plugin	7
Using Vim Fugitive Plugin for Git Operations	9

Mirror GitLab Repositories

Overview	1
Intro to GitLab Repository Mirroring	9
Setting Up Push Mirroring with SSH Protocol	11
Repo Mirroring with HTTPS and Personal Access Tokens	7
Setting Up Pull Mirroring with GitLab Ultimate	6
Push Mirroring from GitLab to GitHub with Fine-Grained Tokens	8

Monitoring Self-Hosted GitLab Mirroring	7
---	---

WEEK 4

153 min.

Manage GitLab Repositories with Lazygit CLI

Overview	1
Intro to Lazygit CLI	10
Setting Up Lazygit on Linux Server	10
Working with Git Commits in Lazygit	9
Manage Git Branches with Lazygit CLI	12
Alter Git Commits and Tags with Lazygit	8

Manage GitLab Repositories with Atlassian SourceTree

Overview	1
Intro to Atlassian SourceTree	8
Install Atlassian Sourcetree on Windows	8
Connect Sourcetree to GitLab Repo with SSH	9
Working with Git Branches from Sourcetree	10
Manage Git Tag Pointers with Sourcetree	10
Temporarily Stash Git Changes with Sourcetree	7

Understanding GitLab Authentication with LDAP

Overview	1
Intro to GitLab Authentication Options	10
Create LDAP Directory Service User Accounts	9
Test Connectivity to LDAP Directory Service with Linux CLI	10
Modify GitLab Configuration File with LDAP Details	10

Logging Into GitLab WebUI with LDAP Users	8
---	---

Overview of Security Features in GitLab

Overview	1
Intro to GitLab Security Features	11
Understanding Dependency Scanning in GitLab	10
Configure Static Application Security Testing in GitLab	10
Enable Secrets Detection in GitLab CI/CD Pipelines	9
Parsing GitLab Vulnerability Reports with PowerShell	10

WEEK 5

61 min.
