

Microsoft System Center Configuration Manager and Cloud Services Integration (70-703)

This System Center Configuration Manager and Cloud Services (70-703) training course covers how to administer devices and applications across medium, large, and enterprise organizations using SCCM. Systems administrators who complete this Microsoft training will be well-positioned to step into specialized device management roles — or just know how to wrangle all the devices on your network.

WEEK 1

Administering Microsoft SCCM and Cloud Services (70-703): Introduction and Installation 156 min.

System Center Configuration Manager Introduction	5
70-703 Exam and Virtual Lab Overview	11
Designing an SCCM Infrastructure	6
Preparing for SCCM Installation	17
Installing SCCM	14

Administering Microsoft SCCM and Cloud Services (70-703): Client and Device Configuration

Configuring Boundaries and Boundary Groups	12
Configuring Active Directory Discovery Methods	15
Creating a Device Collection	14
Creating a User Collection	13
Configuring a Maintenance Window	8

Administering Microsoft SCCM and Cloud Services (70-703): Distributing Content, Creating Queries, and Creating Reports

Preparing the Infrastructure for Content Management	6
Installing a Distribution Point	12
Distributing and Managing Content on Distribution Points	11
Configuring SQL Server Reporting Services (SSRS)	12

WEEK 2

151 min.

Installing a Reporting Services Point	11
Creating a Report using the Report Builder	13

Installing a Data Warehouse Service Point	10
Creating Data Queries	12
Creating Status Message Queries	10

Administering Microsoft SCCM and Cloud Services (70-703): OS Deployment Infrastructure and Management Infrastructure

Preparing the Infrastructure for Operating System Deployment	6
Managing the Site Roles used for Operating System Deployments	11
Configuring Role-Based Administration	10
Configuring Administrative Users	11
Configuring Scopes	9
Configuring Maintenance Tasks	9
Configuring the Backup Site Server Maintenance Task	12
Backing up and Recovering a Configuration Manager Site	10
Monitoring the Site and Component Status	9
Reviewing Log Files using CMTrace	8

WEEK 3

Administering Microsoft SCCM and Cloud Services (70-703): Managing Inventory 166 min.

Preparing the Site for Client Installation	11
Deploying the Configuration Manager Client using Manual Installation	12
Deploying the Configuration Manager Client using Client Push Installation	13
Configuring and Monitoring Client Health	9
Managing Client Settings	10

Configuring Remote Tools Client Settings and Permissions	10
Managing Desktops using Remote Control	9
Configuring and Managing Hardware Inventory	14
Configuring and Managing Software Inventory	12
Preparing the Site for Asset Intelligence	3
Configuring and Managing Asset Intelligence	16
Configuring and Managing Software Metering	15

Administering Microsoft SCCM and Cloud Services (70-703): Managing Applications

Creating Applications	15
Deploying Applications	17

WEEK 4

156 min.

Managing Applications	13
Deploying PowerShell Scripts	10
Configuring Virtual Applications	13
Deploying Virtual Applications	11
Deploying Microsoft Store Applications	9
Deploying Microsoft Store for Business Applications	9
Sideloaded Applications	10
Deploying Office 365 Applications	7
Managing Office 365 Applications	4

Administering Microsoft SCCM and Cloud Services (70-703): OS Deployment and Maintenance

Preparing Operating System Images	15
Deploying Operating Systems	17

Managing Operating System Upgrades	17
Log Analytics and Upgrade Readiness Integration	5
Preparing the Site for Software Updates	16

WEEK 5

152 min.

Deploying Software Updates	15
Configuring Automatic Deployment Rules	13
Monitoring and Troubleshooting Software Updates	13
Creating Configuration Items and Baselines	11
Deploying and Managing Configuration Baselines	13
Monitoring and Troubleshooting Compliance	9
Installing and Configuring an Endpoint Protection Point	10
Configuring Endpoint Protection Updates	10
Configuring Endpoint Protection Policies	10
Monitoring and Managing Endpoint Protection	10

Administering Microsoft SCCM and Cloud Services (70-703): Mobile Device Management (MDM) and Internet-Based Clients & Devices

Preparing the Infrastructure for HTTPS	10
Implementing PKI for Site Systems	13
Implementing PKI for Clients	10
Preparing to Support Internet-Based Client Management (IBCM)	5

WEEK 6

51 min.

Preparing the Infrastructure for Cloud-Based Management	8
---	---

Configuring a Cloud Management Gateway	7
Configuring a Cloud-Based Distribution Point	5
Managing Mobile Devices using the Exchange Server Connector	3
Preparing the Infrastructure for On-Premises MDM	6
Managing Windows 10 Devices using On-Premises MDM	6
Preparing the Infrastructure for Co-Management	6
Configuring and Managing Windows 10 Devices using Co-Management	6
Migrating from Intune Hybrid to Intune Standalone	3
